

Performance

The stopping power of all grades was compared at 40, 60, 80, 100 & 120kph to check both the absolute level of stopping power at these speeds and the variation that occurs with increasing speed.

As can be seen from our chart OEC1/1 fits within the envelope of performance provided by the principal OE products at all speeds. OEC2 fits in the middle of the OE performance envelope with exceptional stability over the speed range.
