

JURATEK

The Genuine Alternative...

Juratek is recognised as one of Europe's leading distributors of brake discs and brake pads for heavy commercial vehicles, trailers and buses.

One reason for our continued success is our development process and quality testing.

In the case of our brake pads, ECE R90 is the final step in a long and comprehensive development process before a product is brought to market. This process is usually carried out in comparison with OE products as a Benchmark and covers the following elements:

- Static Rig Tests
- Dynamometer Tests
- Vehicle Tests

We also apply something "extra" to our development process - Truck Racing. This provides an important insight into the behaviour of brake pads and discs under much higher speeds than are encountered on the roads.

Racing therefore, provides an accelerated test bed for what can happen to a set of brake pads and discs during their normal service lifetime.
