# Distributes Juratek Brake Discs for Passenger Cars & LCV

## Quality Tested

All parts are produced to exacting standards and are quality tested before supply using our CMM measuring machine.

## Coated Non-Braking Surface

**Cosmetic Protection:** As many modern cars are fitted with alloy wheels, a rusty brake disc can be quite unsightly. However the coated brake discs, which can be seen through the alloy wheels remains a pleasant silver colour.

**Vent Protection:** The silver coating is also applied to the edge of the brake discs and inside the vent gap. This means that corrosion will not weaken the internal structure of the brake disc.

## Clear Identification

Juratek brand mark  
Part Number  
Batch Code

## Vent Design as OE

All parts designed to match the OE design using the latest CAD design software

## Precision Machined

Using Computerised Lathes and automatic balancing machines.
