

# From the track...

**JURATEK**

Juratek participates in truck racing which ensures that their braking products always exceed quality expectations. Truck racing provides an important insight into the behaviour of brake pads and discs under much higher speeds than are encountered on the roads. Racing trucks brake from speeds of 160 kph and at consequent energy levels 60% higher per stop than those encountered during normal use.

Racing therefore, provides an accelerated test bed for what can happen to a set of brake pads (and discs) during their normal service lifetime.

Over the years, Juratek have tested their pads and discs on many racing vehicles and have always received outstanding feedback regarding their quality, performance and durability.

**"...better than anything I have used previously..."**

Stuart Oliver, Team Oliver Racing

Wear image of Juratek pads and discs after a full weekend of racing

## ...to the road.

**"...these brakes have changed racing for me. I will never go back..."**

Adam Bint, Bint Racing

**"...this product is miles above the rest..."**

Luke Garrett, Garrett Trucksport
